The World Market for Ultrasonic Flowmeters, 5th Edition

Flow Research covers this fast-growing market in three parts: a Core Study and two Modules. These modules individually analyze the Inline, Clamp-On, and Insertion markets.

Choose the modules that best fit your needs!

Worldwide Ultrasonic Flowmeter Studies

Flow Research has published a new set of three market studies on the worldwide ultrasonic flowmeter market. A primary goal was to determine the size of the ultrasonic flowmeter market in 2016, and to forecast its market size through 2021. The three studies are called:

- **Core Study:** ***The World Market for Ultrasonic Flowmeters***
- **Module A:** ***The World Market for Inline Ultrasonic Flowmeters***
- **Module B:** ***The World Market for Clamp-on and Insertion Ultrasonic Flowmeters***

The three studies identify the following essential elements:

- Market size for all types of ultrasonic flowmeters in 2016 worldwide and by region
- Market shares for all types of ultrasonic flowmeters in 2016 worldwide and by region
- Market growth and forecasts for all types of ultrasonic flowmeters through 2021
- Industries and applications where ultrasonic flowmeters are currently used, and areas of new market growth
- Product analyses for the main companies selling into the ultrasonic flowmeter market
- Strategies to manufacturers for selling into the ultrasonic flowmeter market
- Company profiles of the main suppliers of ultrasonic flowmeters

This market continues to be one of the most dynamic flowmeter markets, and is driven in part by the expanding market for custody transfer of natural gas. Ultrasonic flowmeters excel in this segment of the industrial process applications spectrum.

Why three studies?

The ultrasonic flowmeter market is unique in that it consists of three distinct technology types: inline, clamp-on, and insertion. These three types have fundamentally different applications and are used in different industries. Some companies manufacture only one or two of these three types. By separating the data for each of these types into individual studies we are able to provide much more data for them than we can in a single study on the entire ultrasonic flowmeter market. These three studies together comprise 1,390 pages. They also enable you, our valued client, to obtain research on only the flowmeter types that you manufacture or are interested in.

This gives you much greater value for your market research dollar.

Transit Time and Doppler Flowmeters

One important issue is the contrast in growth between **transit time** and **Doppler** flowmeters. While Doppler flowmeters remain an excellent solution for dirty liquids, transit time flowmeters have been showing faster growth in recent years. Much of the new product development is going into transit time meters. Transit time flowmeters are typically more accurate than Doppler meters, and multipath transit time meters have become more widely used for custody transfer of natural gas.

This study analyzes the market for **multipath** ultrasonic meters for both gas and liquid, and segments this market by number of paths. The ultrasonic flowmeter market for custody transfer of natural gas is one of the fastest growing markets within flow, and is of great interest to users and suppliers alike. Multipath meters for petroleum liquids are also showing significant growth.

These studies address the key issues in the ultrasonic flowmeter market today, including:

- Growth in the transit time ultrasonic flowmeter market by number of paths
- Shipments of inline ultrasonic flowmeters by revenues and units
- Shipments of clamp-on and insertion ultrasonic flowmeters by revenues and units
- Comparisons of portable vs. fixed clamp-on ultrasonic flowmeters
- The expanding use of ultrasonic flowmeters for custody transfer of natural gas
- New entrants in the ultrasonic flowmeter market
- Mergers and acquisitions in the ultrasonic flowmeter market

Background of Technology

There are two main types of ultrasonic flowmeters: transit time and Doppler. A transit time ultrasonic flowmeter has both a sender and a receiver. It sends two ultrasonic signals across a pipe at an angle: one with the flow, and one against the flow. The meter then measures the "transit time" of each signal. When the ultrasonic signal travels with the flow, it travels faster than when it travels against the flow. The difference between the two transit times is proportional to flowrate.

Doppler flowmeters also send an ultrasonic signal across a pipe. However, instead of tracking the time the signal takes to cross to the other side, a Doppler flowmeter relies on having the signal deflected by particles in the flow stream. These particles are traveling at the same speed as the flow. As the signal passes through the stream, its frequency shifts in proportion to the mean velocity of the fluid. A receiver detects the reflected signal and measures its frequency. The meter calculates flow by comparing the generated and detected frequencies.

Ultrasonic flowmeters were first introduced for industrial use in 1963 by Tokyo Keiki in Japan. Initially, ultrasonic flowmeters were not well understood, and were sometimes misapplied. Many technological improvements have been made in the past 15 years, and the limitations of ultrasonic meters are better understood. Advances in transit time technology have also broadened the types of liquids that transit time flowmeters can be used on. Many transit time meters today can handle liquids containing some impurities, and ultrasonic flowmeters have become a preferred measurement technology in the natural gas industry.

Rationale for Studies

Since completing our first ultrasonic study in 2001, we have been following this market very closely. We published the 2nd Edition of this study in 2003, the 3rd Edition in 2008, and the 4th Edition in 2013. We have placed ultrasonic technology with others, such as Coriolis and electromagnetic, within the "new technology" group of flowmeters. User interest and market growth are both especially significant within the new-tech process control instrumentation arena. Many of these developments have been described in our quarterly report, *Market Barometer*, where each issue includes an update on the ultrasonic flowmeter market.

The 2017 studies build on the knowledge gained over the years since our last full treatment of the subject, but also represent a completely fresh look at the market. **We divide the research results into a Core Study and two Modules, and once again have analyzed the inline, clamp-on, and insertion markets individually**. This method enables us to separate out unit price and unit quantity data for each technology, and provide a distinctive analysis for each of these three fundamentally different ultrasonic flowmeter types.

We present these three studies to you to enable you to see both the forest and the trees when it comes to the ultrasonic flowmeter market. Our understanding is that Flow Research stands alone in providing such a comprehensive analysis of the worldwide ultrasonic flowmeter market.

In flowmeter terminology, a path is defined as the route of travel between two ultrasonic transducers. The term 'path' is critical in ultrasonic technology, because many ultrasonic flowmeters have been developed with multiple paths. Some ultrasonic meters have a single path, requiring one pair of transducers, and some have dual paths, requiring two transducer pairs. An important group of ultrasonic flowmeters have three or more paths, and are called multipath. Many of these multipath meters are used for custody transfer applications.

Another term that is now in common use is 'chord'. Mathematically speaking, a chord is a straight line within a circle whose points lie on the circumference. However, the term 'chord' is also used by some ultrasonic manufacturers to refer to the route of travel between two transducers. In this way, a chord is like a path. However, a chord is considered to be the route of travel between a transducer and a wall or reflector when the signal is bounced off a wall or a reflector. So in this sense, an ultrasonic signal that bounces off a wall or reflector to a receiving transducer has one path and two chords. One chord is the path of the signal from Transducer A to the pipe wall or reflector, and the second chord is the path of the signal from the pipe wall or reflector to Transducer B.

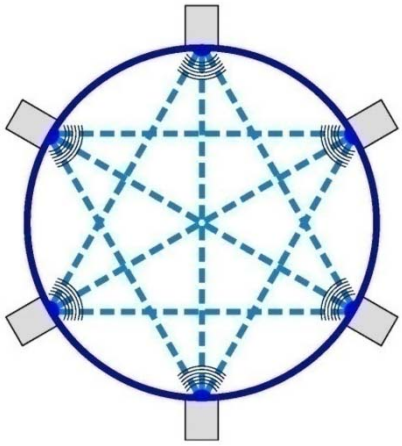

Illustration of an ultrasonic flowmeter with 18 non-parallel paths (this end-view image shows only one half the total number of paths)

Core Study: The World Market for Ultrasonic Flowmeters

The ***Core Study*** includes all three components of the worldwide ultrasonic flowmeter market:

- Inline ultrasonic flowmeters
- Clamp-on ultrasonic flowmeters
- Insertion ultrasonic flowmeters

The ***Core Study*** contains its own set of segmentation based upon the worldwide findings of the two companion stand-alone studies, Modules A and B. These modules focus on the inline and clamp-on/insertion markets, respectively. The ***Core Study*** is designed to provide a comprehensive view of the entire ultrasonic flowmeter market, and to combine the most important segmentation data of the inline (spoolpiece), insertion, and clamp-on components of this market.

The ***Core Study*** combines all three submarkets into a single market. So if you need to know the geographic breakout of the total ultrasonic market, rather than only the geographic breakout for clamp-on meters, then the ***Core Study*** will provide that answer. Likewise, if you need to know the segmentation by fluid type or by industry for the total ultrasonic market, you can find the answers in the ***Core Study***.

The ***Core Study's*** greatest value is that it analyzes the entire ultrasonic market, while Modules A and B are indispensable because they provide distinct segmentation detail not available in the ***Core Study***. If you are looking for the big picture of the market, the ***Core Study*** may be the only study you need. If you also want the detailed segmentation specifics contained in Modules A and B, then the ***Core Study*** is the perfect companion to those two studies.

Study Organization

The ***Core Study*** contains the fundamental segmentation of inline, clamp-on, and insertion, and is further segmented by the eight geographic regions. Worldwide totals are also presented for each technology.

Worldwide market size data for 2016 is included on both a dollar and unit basis for each of the three ultrasonic technologies. Market size data is also provided by geographic region. Annual forecast data for each technology type will also be provided on both a worldwide and regional basis for each year of the study period 2016 through 2021.

Ultrasonic technology is also set within the perspective of competing technologies in the worldwide flow marketplace. The ***Core Study*** provides reviews of nine other flowmeter technologies, and provides growth factors relevant to ultrasonic flowmeters. A product analysis for each of more than twenty competing manufacturer product lines is provided. The average selling price for ultrasonic flowmeters on both a worldwide and regional basis is included, together with CAGR (compound average growth rates) for each region through 2021.

The following pages list in further detail the information available in the ***Core Study***.

Core Study: Worldwide Data Segmentation

CORE STUDY
All Ultrasonic Flowmeters

This volume is designed to provide a comprehensive view of the entire ultrasonic flowmeter market, and to combine the most important segmentation data of the inline (spoolpiece), insertion, and clamp-on components of this market.

The ***Core Study*** combines all the component data into a single picture of the entire ultrasonic market worldwide.

The study segmentation data for the ***Core Study*** is outlined below:

Geographic Segmentation

- North America (United States and Canada)
- Western Europe
- Eastern Europe / Former Soviet Union (FSU)
- Mideast / Africa
- Japan
- China
- Asia / Pacific (including India)
- Latin America (Mexico, Central and South America)

Shipments of All Ultrasonic Flowmeters by Technology Type Worldwide and by Region

- Inline
- Clamp-on
- Insertion

Average Selling Price of All Ultrasonic Flowmeters

- Worldwide
- By Region

All Ultrasonic Flowmeters by Fluid Type Worldwide and by Region

- Petroleum Liquids
- Non-petroleum Liquids
- Gas
- Steam

All Ultrasonic Flowmeters by Industry Worldwide and by Region

CORE STUDY
All Ultrasonic Flowmeters

- Oil & Gas
- Refining (refineries, gas processing)
- Chemical
- Food & Beverage
- Pharmaceutical
- Pulp & Paper
- Metals & Mining
- Power
- Water & Wastewater
- Other

Inline Ultrasonic Flowmeters by Distribution Channel Worldwide and by Region

- Direct Sales
- Independent Representatives
- Distributors
- E-Business

Inline Ultrasonic Flowmeters by Customer Type Worldwide and by Region

- End-users
- Original Equipment Manufacturers (OEMs)
- Systems Integrators
- Engineers/Consultants
- Resellers (e.g., private label, catalog)

Clamp-on and Insertion Ultrasonic Flowmeters by Distribution Channel Worldwide and by Region

- Direct Sales
- Independent Representatives
- Distributors
- E-Business

Clamp-on and Insertion Ultrasonic Flowmeters by Customer Type Worldwide and by Region

- End-users
- Original Equipment Manufacturers (OEMs)
- Systems Integrators
- Engineers/Consultants
- Resellers (e.g., private label, catalog)

Market Shares of Ultrasonic Flowmeter Manufacturers

- Worldwide
- Inline
- Clamp-on
- Insertion

Strategies for Success

- Competitive points of product emphasis
- Discussion of market forces at work
- Competing in the ultrasonic flowmeter market
- Pursuing new applications
- Technical developments
- Customer education and other market strategies and tactics
- Acquisitions and product partnerships
- Forming alliances to enhance product offerings

Company Profiles

- Business profiles of the main suppliers of ultrasonic flowmeters
- Histories, current organization, overall product line summaries
- Ultrasonic flowmeter product line descriptions
- Company strategies

The following is a partial list of the ultrasonic flowmeter suppliers profiled in these studies:

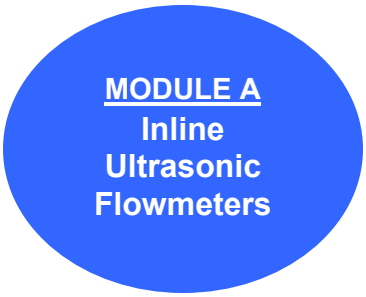
- Badger Meter
- Elis Plzeň
- Emerson – Daniel
- Endress+Hauser
- Flexim
- Fluenta
- Fuji Electric
- General Electric (GE Measurement)
- Honeywell (including Elster)
- IDEX (including Accusonic, Faure Herman, and Liquid Controls)
- KROHNE
- OVAL Corporation
- Rittmeyer
- RMG
- Schlumberger – Cameron
- SICK
- Siemens
- TechnipFMC
- Teledyne Technologies (including Monitor Labs)
- Tokyo Keiki
- Tokyo Keiso
- Ultraflux

Publication Date

Core Study: **The World Market for Ultrasonic Flowmeters, 5th Edition** was published in September 2017.

www.FlowUltrasonic.com

Module A: The World Market for Inline Ultrasonic Flowmeters



The inline market is quite different from the clamp-on and insertion markets. This applies to applications, industries, price points, and many other factors. By isolating the inline (spoolpiece) market from the clamp-on and insertion markets, a much more compelling and informative analysis results.

Creating three separate modules for the ultrasonic study has proved to be very enlightening. For example, multipath inline ultrasonic flowmeters are especially important in the fast-growing market for custody transfer of natural gas. This ultrasonic technology type is highlighted here in ***Module A***, and it is analyzed in terms of dollar and unit shipments worldwide and by region, as well as by average selling prices worldwide and by region.

This study provides segmentation in the following categories:

- Technology Type
- Single/Dual Path Transit Time
- Multipath Transit Time
- Mounting Type
- Single and Dual Transmitters
- Fluid Type
- Intelligence Level
- Communication Protocol
- Petroleum Liquids Applications
- Non-petroleum Liquids Applications
- Gas Applications
- Line Size
- Industry
- Distribution Channel
- Customer Type

What's in this for your company?

- See the emerging applications and where the growth is
- Understand world and regional markets
- Get to know your real competition
- Learn what other suppliers manufacture, where, and for whom
- The best information creates the best decisions

Module A: Worldwide Data Segmentation

All segmentation is provided on a worldwide basis as well as by the eight geographic regions below, with forecast data provided through 2021. The segmentation for this inline ultrasonic flowmeter study is as follows:

Geographic Segmentation

- North America (United States and Canada)
- Western Europe
- Eastern Europe/FSU (Former Soviet Union)
- Mideast/Africa
- Japan
- China
- Asia/Pacific (including India)
- Latin America (Mexico, Central and South America)

Shipments of Inline Ultrasonic Flowmeters
Worldwide and by Region in Revenues and Units

MODULE A
Inline

Shipments of Inline Ultrasonic Flowmeters
Worldwide and by Region by Technology Type

- Transit Time – Single Path / Dual Path
- Transit Time – Multipath

Plus individual segments for **Shipments of each of the Technology Types above**

- Worldwide by Region

Average Selling Prices of All Inline Ultrasonic Flowmeters Worldwide and by Region

Average Selling Prices of Inline Ultrasonic Flowmeters Worldwide by Region
by Technology

- Transit Time – Single Path/Dual Path
- Transit Time – Multipath

Shipments of Inline Ultrasonic Flowmeters Worldwide by Mounting Type

- Wafer
- Flanged
- Other

Shipments of Inline Ultrasonic Flowmeters Worldwide by Configuration

- Single transmitter
- Dual transmitter

Shipments of Inline Ultrasonic Flowmeters Worldwide and by Region by Fluid Type

- Petroleum Liquids
- Non-petroleum Liquids
- Gas
- Steam

Shipments of Inline Ultrasonic Flowmeters Worldwide and
by Region by Intelligence Level

- Smart
- Conventional

Shipments of Smart Inline Ultrasonic Flowmeters Worldwide and by Region
by Communication Protocol

- HART
- Foundation Fieldbus™
- Profibus®
- Modbus
- Proprietary digital
- Ethernet
- Other

Shipments of Inline Ultrasonic Flowmeters
Worldwide and by Region
for Petroleum Liquid Applications

MODULE A
Inline

- Custody Transfer of petroleum liquids
- Check Metering
- Leak Detection (upstream / midstream / downstream)
- Liquefied Natural Gas (LNG) including custody transfer and other applications
- In-plant process measurement
- District Heating
- Other

Shipments of Inline Ultrasonic Flowmeters
Worldwide and by Region
for Non-petroleum Liquid Applications

- Custody Transfer of non-petroleum liquids
- Check Metering
- Water Treatment/Disposal/Reinjection of oil/gas wells
- In-plant Process Measurement
- Batch / Filling
- District Heating
- Other

Shipments of Inline Ultrasonic Flowmeters
Worldwide and by Region
for Gas Applications

- Custody Transfer of natural gas
- Check Metering
- Leak Detection
- Process Measurement
- Compressed Natural Gas (CNG)
- Flare / Stack Gas Flow Measurement
- Other

Shipments of Inline Ultrasonic Flowmeters
Worldwide and by Region
by Line Size

- ≤ 2 inches
- > 2–4 inches
- > 4–8 inches
- > 8–12 inches
- > 12–24 inches
- > 24 inches

MODULE A
Inline

Shipments of Inline Ultrasonic Flowmeters Worldwide and by Region by Industry

- Upstream Oil & Gas
- Midstream Oil & Gas
- Refining (Oil / Gas Processing / Treatment)
- Downstream Oil & Gas (transportation, distribution)
- Chemical
- Food & Beverage
- Pharmaceutical
- Pulp & Paper
- Metals & Mining
- Power
- Water & Wastewater
- Other

Shipments of Inline Ultrasonic Flowmeters Worldwide and by Region by Distribution Channel

- Direct Sales
- Independent Representatives
- Distributors
- E-Business

Shipments of Inline Ultrasonic Flowmeters Worldwide and by Region by Customer Type

- End-Users
- Original Equipment Manufacturers (OEMs)
- Systems Integrators
- Engineers/Consultants
- Resellers

Market Shares of Inline Ultrasonic Flowmeter Manufacturers

- Worldwide and by geographic region

Strategies for Success

- Growth factors and technologies effecting change in the market
- Strategies for selling into the competitive inline ultrasonic flowmeter market

Company Profiles of the main suppliers of inline ultrasonic flowmeters

- Histories, current organization, overall product line summaries
- Inline ultrasonic flowmeter product line descriptions
- Company strategies

Suppliers profiled in Module A:

- Badger Meter
- Elis Plzeň
- Emerson – Daniel
- Endress+Hauser
- Fuji Electric
- General Electric
- Honeywell – Elster
- IDEX – Faure Herman
- KROHNE
- OVAL Corporation
- RMG
- Schlumberger – Cameron
- SICK
- Siemens
- TechnipFMC
- Tokyo Keiso
- Ultraflux

Publication Date

Module A: **The World Market for Inline Ultrasonic Flowmeters** was published in **July 2017**.

www.FlowUltrasonic.com

Module B: The World Market for Clamp-on and Insertion Ultrasonic Flowmeters

MODULE B
Clamp-on and Insertion Ultrasonic Flowmeters

Module B: ***The World Market for Clamp-On and Insertion Ultrasonic Flowmeters***, contains its own set of segmentation designed to provide a comprehensive view of these two members of ultrasonic flowmeter technology and its markets. There is segmentation to address the unique qualities of these two ultrasonic flowmeter designs. The study segmentations specific to clamp-on and to insertion design types are outlined below.

Clamp-on and insertion ultrasonic flowmeters have established their own set of advantages within the flow measurement market. Clamp-on devices are highly versatile in that they can be installed in either a portable or fixed manner, making them ideal choices for economical meter upgrades, as check meters, and a host of other applications. Clamp-on ultrasonic flowmeters are suitable for use with gas, liquid, and steam flows. Insertion devices permit users to obtain the benefits of ultrasonic technology in virtually any line size.

Module B: Worldwide Data Segmentation

All segmentation is provided on a worldwide basis as well as by the eight geographic regions below, with forecast data provided through 2021.

Geographic Segmentation

- North America (United States and Canada)
- Western Europe
- Eastern Europe/FSU (Former Soviet Union)
- Mideast/Africa
- Japan
- China
- Asia/Pacific (including India)
- Latin America (Mexico, Central and South America)

This study provides a **separate section of segmentation for clamp-on ultrasonic flowmeters** and a **separate section of segmentation for insertion ultrasonic flowmeters** as follows:

Clamp-On Ultrasonic Flowmeters

Shipments of Clamp-On Ultrasonic Flowmeters Worldwide and by Region

Shipments of Clamp-On Ultrasonic Flowmeters Worldwide and by Region by Technology

- Transit Time – Single/Dual Path
- Transit Time – Multipath
- Doppler
- Hybrid

Plus individual segments for **Shipments of each of the Technology Types above**

- Worldwide by Region

MODULE B
Clamp-on and Insertion

Average Selling Prices of Clamp-On Ultrasonic Flowmeters Worldwide and by Region

- Average selling prices for all eight regions are provided

Average Selling Prices of Clamp-on Ultrasonic Flowmeters Worldwide and by Region by Technology Type

- Transit Time – Single/Dual Path
- Transit Time – Multipath
- Doppler
- Hybrid

Shipments of Clamp-On Ultrasonic Flowmeters Worldwide and by Region by Mounting Type

- Portable
- Fixed

Shipments of Clamp-On Ultrasonic Flowmeters Worldwide and by Region by Fluid Type

- Petroleum Liquids
- Non-petroleum Liquids
- Gas
- Steam

What's in this for your company?

- See the emerging applications and where the growth is
- Understand world and regional markets
- Get to know your real competition
- Learn what other suppliers manufacture, where, and for whom
- The best information creates the best decisions

Shipments of Clamp-on Ultrasonic Flowmeters Worldwide and by Region for Liquid Applications

- Check Metering
- Leak Detection (upstream / midstream / downstream)
- Liquefied Natural Gas (LNG) – including all applications
- In-plant Process Measurement
- District Heating
- Other

Shipments of Clamp-on Ultrasonic Flowmeters Worldwide and by Region for Gas Applications

- Check Metering
- Leak Detection (upstream / midstream / downstream)
- Flare/Stack Gas Flow Measurement
- Compressed Natural Gas (CNG) – all applications
- Liquefied Natural Gas (LNG) – all applications
- In-plant Process Measurement
- Other

Shipments of Clamp-On Ultrasonic Flowmeters Worldwide and by Region by Industry

MODULE B
Clamp-on and Insertion

- Upstream Oil & Gas (exploration & production)
- Midstream Oil & Gas (from upstream to refining/processing facility)
- Refining
- Downstream Oil & Gas (refined product transportation and distribution)
- Chemical
- Food & Beverage
- Pharmaceutical
- Pulp & Paper
- Metals & Mining
- Power
- Water & Wastewater
- Other

Market Shares for Leading Suppliers of Clamp-on Ultrasonic Flowmeters

- Worldwide
- For each geographic region

Insertion Ultrasonic Flowmeters

Shipments of Insertion Ultrasonic Flowmeters Worldwide and by Region

- North America (United States and Canada)
- Western Europe
- Eastern Europe/Former Soviet Union (FSU)
- Mideast/Africa
- Japan
- China
- Asia/Pacific
- Latin America (Mexico, Central and South America)

Shipments of Insertion Ultrasonic Flowmeters Worldwide and by Region by Technology

- Transit Time – Single/Dual Path
- Transit Time – Multipath

Plus individual segments for **Shipments of each of the Technology Types above**

- Worldwide by Region

Average Selling Prices of Insertion Ultrasonic Flowmeters Worldwide and by Region

- Average selling prices for all eight regions are provided

MODULE B
Clamp-on and Insertion

Shipments of Insertion Ultrasonic Flowmeters Worldwide and by Region by Fluid Type

- Petroleum Liquids
- Non-petroleum Liquids
- Gas
- Steam

Shipments of Insertion Ultrasonic Flowmeters Worldwide and by Region by Application

- Check Metering
- Flare/Stack Gas Flow Measurement
- In-plant Process Measurement
- District Heating
- Other

Shipments of Insertion Ultrasonic Flowmeters Worldwide and by Region by Industry

- Oil & Gas
- Refining
- Chemical
- Food & Beverage
- Pharmaceutical
- Pulp & Paper
- Metals & Mining
- Power
- Water & Wastewater
- Other

Note: ***Distribution Channels*** *and* ***Customer Types*** *for clamp-on and insertion ultrasonic flowmeters combined are included in the segmentation of the Core Study of the Series.* ***Core Study: The Worldwide Market for Ultrasonic Flowmeters, 5th Edition****.*

Market Shares for Leading Suppliers of Insertion Ultrasonic Flowmeters

- Worldwide
- For each geographic region

Strategies for Success

Topics including:

- Growth factors and technologies effecting change in the clamp-on and insertion ultrasonic flowmeter markets
- Strategies for selling into the competitive clamp-on and insertion ultrasonic flowmeter markets

Company Profiles

- Business profiles of the main suppliers of clamp-on and insertion ultrasonic flowmeters
- Histories, current organization, overall product line summaries
- Clamp-on and insertion ultrasonic flowmeter product line descriptions
- Company strategies

The following is a partial list of the ultrasonic suppliers profiled in Module B:

- Badger Meter
- Elis Plzeň
- Endress+Hauser
- Flexim GmbH
- Fluenta
- Fuji Electric
- General Electric
- IDEX – Accusonic
- KROHNE
- OVAL
- Rittmeyer

The Flow Research *Founding Sponsor Program*

To produce studies that most closely match our clients' needs, Flow Research instituted the *Founding Sponsor Program*. This program enables companies who wish to participate at a high level in a study's research to influence its scope and segmentation. In addition, Founding Sponsors receive regular updates from Flow Research on study progress, and receive a significant discount on the standard retail price of the study.

Procedure: Early in the planning phase of a study, founding sponsors receive a proposal that includes the proposed segmentation. Founding sponsors can propose additional segmentation, and can also suggest changes to the proposed segmentation. While the decision to adopt particular segmentation ultimately lies with Flow Research, and is based on input from all contributors, we will do our best to accommodate the specific needs of each of our clients.

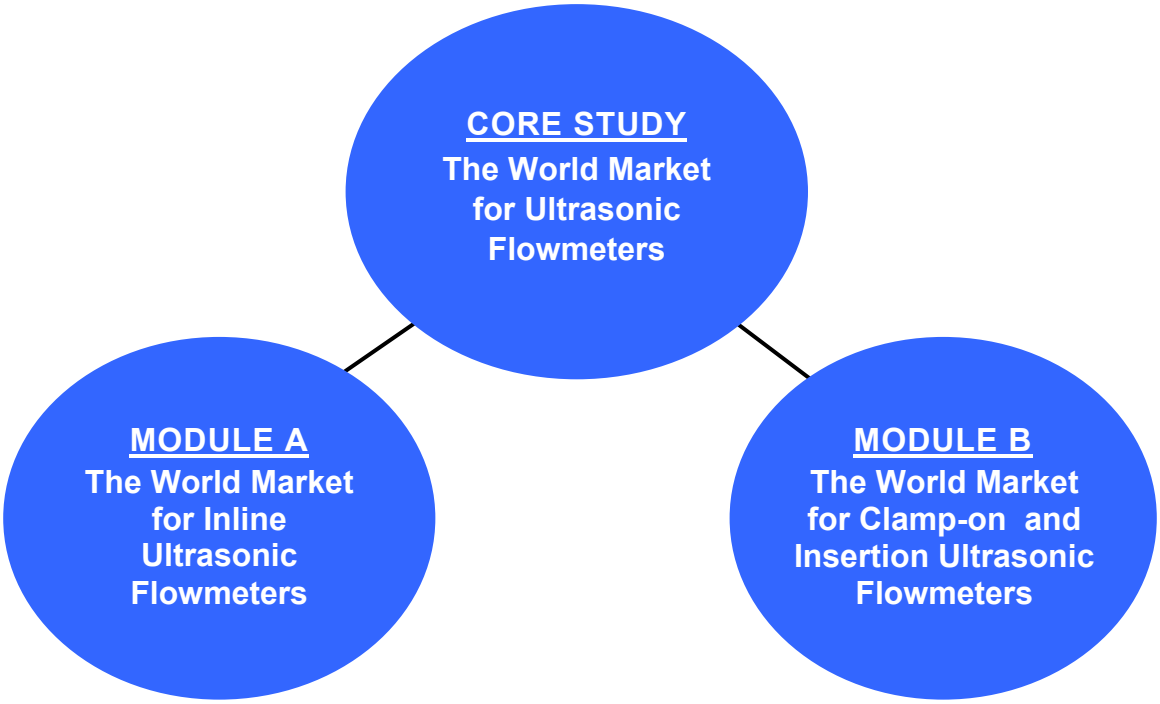
During the research phase of a study, Flow Research will issue regular reports that provide updates on the progress of the research. These reports will be sent to Founding Sponsors, who are then invited to provide any additional input or comments into the study.

Being a founding sponsor requires making an early commitment to purchase the study. However, in return, founding sponsors receive a significant discount off the regular price of the study. Payment can be made either in one amount at the beginning of the study, or split into two, with the second payment due upon delivery of the study.

For additional details, or to find out how the *Founding Sponsor Program* applies to any particular study, please contact Flow Research. We look forward to working with you!

If you have any questions about the *Founding Sponsor Program*, please contact Norm Weeks at +1 781 245-3200, or norm@flowresearch.com.

The World Market for Ultrasonic Flowmeters, 5th Edition



Five reasons to place your study order today!

- The three studies together contain over 1,300 pages with a complete analysis of the inline, clamp-on, and insertion ultrasonic flowmeter markets.
- It is the only market research study available that clearly separates the data on the inline, clamp-on, and insertion ultrasonic flowmeter markets.
- It is backed up by 20 years of research into the ultrasonic and competing flowmeter markets.
- It completely analyzes the ultrasonic flowmeter market, including market size, market forecasts, market shares, strategies for success, and supplier profiles.
- It is brought to you by Flow Research, the world's leading market research company on flowmeters and instrumentation.

www.FlowUltrasonic.com

Flow Research, Inc.

Flow Research is the only market research company whose primary mission is to research flowmeter and instrumentation markets. Flow Research specializes in instrumentation, and conducts **market research studies** in a wide variety of instrumentation areas that can be purchased by anyone interested in the topics. We create these studies through interviews with suppliers, distributors, and end-users. Topics include all of the flowmeter technologies – both new and traditional – as well as temperature sensors and pressure transmitters.

Ultrasonic Flowmeter Research Team Background

Dr. Jesse Yoder is President of Flow Research Inc., a company he founded in 1998. Dr. Yoder has 30 years of experience as a writer and as an analyst in process control and instrumentation. He is the lead analyst for this study. Since 1990, he has written more than 200 market research studies, most of them regarding flow and instrumentation. Dr. Yoder has also written more than 280 articles on flow and instrumentation for trade journals. Many can be found at www.flowarticles.com. Dr. Yoder has received two patents for new flowmeter designs. Several prototypes are currently being tested. His latest book, *The Tao of Measurement*, with Richard E. Morley as co-contributor, was published in 2015 by the ISA.

Norm Weeks, Senior Market Analyst, joined Flow Research in 2004 after a 24-year stint with Verizon. At Verizon, Norm specialized in creating innovative solutions for national and international enterprises, introducing new products and lifecycle management. At Flow Research, his contributions in development, research, and writing have been significant to studies, custom projects, White Papers, and Worldflow's *Energy Monitor* and *Market Barometer*.

Leslie Buchanan, Research Associate, joined Flow Research in March 2010. She assists with research and writing for Flow Research studies and publications, develops and implements standards for publication formats, and assists with customer liaison and the contact database.

David Goldstein, Business Analyst, joined Flow Research in September 2016. David has an MBA from Boston University and 30 years of professional experience including various management positions in Sales and Marketing with consumer product companies. At Flow Research, he combines his market research and business analyst skills with his creativity and organizational abilities to assist in researching and writing for studies and projects.

Harry Lund, Sales Director, joined Flow Research in October 2016. He has 45 years experience in the flow measurement industry with several US and international corporations. At Flow Research, his experience and skills with people, products and the flow measurement business world are a valuable resource.

Vicki Tuck, Administrative Assistant, joined Flow Research in June, 2012. She has experience in both the fast-paced law firms of Boston, and in various nonprofit organizations. In addition to administrative support, she also collects news for Flow Research publications.

Christina Glaser, a Research Analyst, is a seasoned software programmer, systems architect, and developer with significant website experience. In addition to her technical talent, she brings significant customer savvy, with clients that have ranged from Staples to Microsoft.

Flow Research studies contribute to an ongoing view of the flowmeter market

Listed below is a summary of Flow Research studies in process as well as studies completed during the last few years in the area of process control instrumentation. Conducting these studies has contributed to a more thorough understanding of the flowmeter technologies included in ***The World Market for Coriolis Flowmeters, 5th Edition***. The studies below and others are further described at www.flowstudies.com.

Calibration	
Core Study: Worldwide Gas Flow Calibration Facilities and Markets	*www.flowcalibration.org*
Module A: Worldwide Liquid Flow Calibration Facilities and Markets	*www.flowcalibration.org*

Besides writing and publishing studies of this type, Flow Research specializes in user surveys that include a detailed analysis of customer perceptions. In addition, Flow Research provides quarterly updates on the flow and energy industries in the **Market Barometer** and the **Energy Monitor**. The **Energy Monitor** analyzes the current state of the oil & gas, refining, power, and renewables industries, and the implications for instrumentation suppliers. Both publications are part of the Worldflow Monitoring Service. More details are available at www.worldflow.com.
